*Bringing Safety and Accountability  
to Vessel Management*

## A Complete Vessel Management Tool

YachtLink® is a comprehensive and easy-to-use software program that increases efficiency and reduces the workload in every department, making vessel management easy to monitor and implement. YachtLink® has been designed with the crew in mind. Common sense design leads you through the program with simple clicks of the mouse and has many features to help captains, engineers, interior and deck departments to store important data and maintain a safe and efficient vessel. YachtLink® is the only solution available that is truly cross-platform, working on both Windows and Mac OS simultaneously. Discover the simplest and most comprehensive program for your vessel. Discover YachtLink®.

- New Builds & Refits.
- Ship's Stores and Inventory.
- Electronic Documentation.
- Jobs and Warranties.
- Yachtlink Manager, Electronic Purchasing and Data Transfers.
- Safety Management System, ISM.
- Security Management, ISPS.
- Crew & Guest Profiles.
- Planned Maintenance Scheduling.
- Vessel Maintenance.
- Engineer's Logs.

### New Builds & Refits

The key element of yacht management software is the essential information about equipment, spares and a planned maintenance schedule setup prior to launch and available for the crew. YachtLink Engineering can assist in preparing a fully documented vessel to include all equipment specifications, electronic documentation, spare parts and all planned maintenance scheduling during the build and setup prior to launching, immediately providing essential information for the crew. Documenting a new yacht can be a time consuming job; scanning documents, taking pictures, entering detailed information about equipment, setting up recommended planned maintenance. YachtLink Engineering can help you prepare this and provide a fully functioning vessel management system.

- Vessel specifications and equipment.
- Enter & store ship's spares.
- Electronic catalog of systems & equipment.
- Setup a planned maintenance schedule.
- Store documents related to equipment, maintenance & specifications.

### Ship's Spares & Inventory

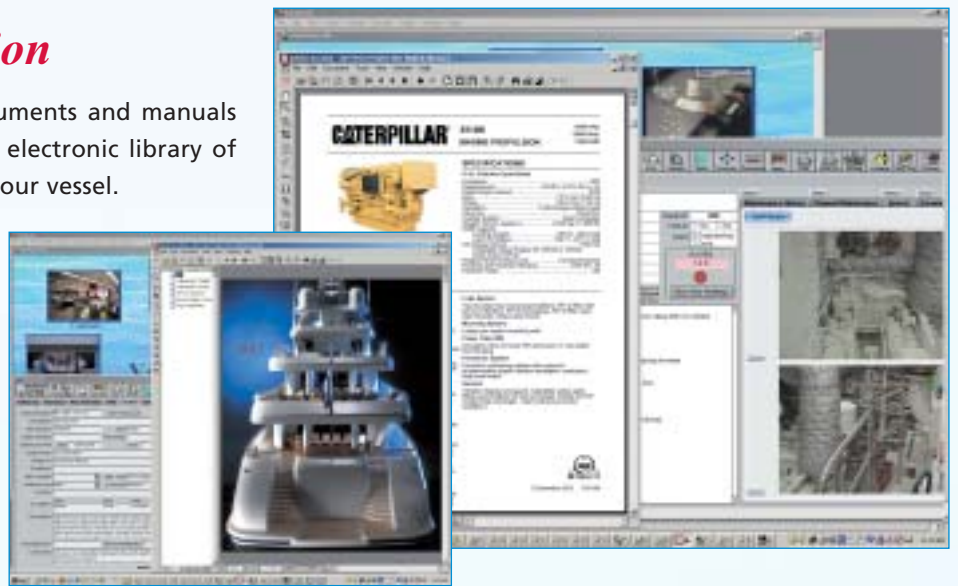

Have the confidence that you are equipped with spare parts and supplies needed for every voyage. With YachtLink® your crew can easily and efficiently order parts by allowing electronic transferring of information to ensure accurate orders. Enhanced features include the vessel's as-built drawings with corresponding storage areas to be used as a visual guide to locate any item on board. Finding your spares is as simple as clicking on the ship's plan.

- Keep an accurate count of spares on board.
- Inventory management for each department.
- Easily create orders and fax or email them to suppliers.
- Bar-Coding.
- Implement vessel's as-built drawings to use as a parts locator.
- Quickly view what is stored in each storage location.
- Find items & locations quickly and instantly.

## Electronic Documentation

YachtLink® can be prepared with all documents and manuals digitally produced to provide a complete electronic library of all specifications and documentation for your vessel.

Be able to search for drawings and pages in your technical manuals without even opening a book, all information can be accessed. While navigating through YachtLink® you will have the ability to not only view maintenance and spares for your equipment, but also be able to open pages in the manual that pertain to what you are viewing.

## YachtLink Manager®, ordering spares and transferring information

YachtLink® has an easy and accurate purchasing module. You can quickly fax or email purchase orders to your favorite supplier, send ISM and ISPS and PM documents to your DPA or management company and Maintenance history with Warranty issues to the builder. YachtLink Manager®, when used by you builder or supplier, can import orders and export records to supply to the yacht virtually **eliminating data entry**, and with some of the major suppliers and builders using this system, both the yacht and the shore based companies will stay up to date with all issues on board.

- Quickly and easily email orders.
- Transfer important documents to shore based companies.
- Receive most updated record information.
- Yachtlink® can be loaded prior to launching with all recommended spares lists.

## Jobs, Projects & Warranties

YachtLink® also provides a module for jobs and projects, where you can create bid requests for repair yards, create job records which you can send to the yards prior to a visit and schedule and track the projects on board. The ability to send all details and specifications on equipment helps to provide accurate quotes, better preparation and faster completion of major projects. The Engineer can create work orders and delegate them either to crew, sub contractors or yard, giving him organizational control of the complete yard period.

- Create bid requests for repair yards.
- Keep track of projects on board.
- Create jobs from maintenance logs for dispersing to sub-contractors.

## *Safety Management, ISM*

Since more demands are being put on qualifications for Yacht codes, more documentation is required to meet these demands. Yachtlink® provides an in-depth Safety Management System for the crew to store all-important data to meet ISM and ISPS codes. Yachtlink® tracks all inspections on safety items and stores documents relating to all safety issues, giving reminders when drills or any safety inspections are due. Safety management is a priority and reporting all safety activities is becoming a requirement.

Yachtlink® can be configured to monitor and report on all safety items on board to give you monthly reporting that can be used to meet the ISM code.

### **Safety Logs**

- Incidents, non conformities and corrective action.
- Crew inductions and routine fire & safety drill scheduling.
- Medical activities and emergencies.
- Monthly PM reports, audit reviews, observations and master verifications.

## *Security Management, ISPS*

With the requirement of the ISPS code, every large vessel needs to keep all security systems updated and report on all needed activity for these requirements. Make sure your vessel is protected and prepared. Protect against terrorists and piracy by complying to this code and provide all necessary documentation needed.

- Security system reporting.
- Security Equipment maintenance.
- Training.
- Drills and audits.

## *Crew and Guest Profiles*

Profiles can be kept of all crewmembers, including certificates, medical and financial information, and uniforms. You can store information and pictures of all guests who have been on board, for future reference.

Information about crew and guests on board are necessary, and must be handed over to customs as requested. With Yachtlink®, all required information can be printed and handed over to customs at the click of a button. The crew and guest profiles can hold all personal, financial and medical information as well as qualification and safety information about crew and guests.

- Store detailed profiles for all crew and guests.
- Customs forms with active crew and guest details.
- Crew qualification, medical and financial information.
- Guest preferences such as foods, allergies, medical conditions, hobbies etc.

## *Additional Features and Options*

- Yachtlink® can be customized to owner's & crew's requirements including photographs and logos for each personalized edition.
- Complete installation by Yachtlink Engineering could include planning, hardware, software and training.
- Customer data preserved and imported.
- Multi-User licensing and password access levels.
- Instructional videos.
- Documenting hidden locations for future required maintenance.
- Daily work lists.
- Ship's logs for underway, crossing & at anchor.
- Electronic signature for maintenance and ISM requirement.
- Yachtlink Engineering can also provide all hardware necessary to ensure a solid foundation for long lasting network for the database.
- Certification by governing bodies available upon request.

## Planned Maintenance Scheduling

The system alerts you when specific areas of the vessel need attention, based on hours being used, or elapsed time intervals. These reminders can be printed and given to the crew as a work order. Every aspect of maintenance can be effectively monitored by the system.

Maintain or replace items before problems occur and document the work as completed, thus ensuring the vessel stays in a healthy and safe condition, dependable and well maintained.

- Separate maintenance logs for each department.
- Creates a complete, planned maintenance schedule.
- View reminders of records flagged for service.
- Print daily work lists for crew and sub contractors.

A screenshot of the YachtLink software interface. The top section displays 'Engineer's Information' and 'Maintenance Log' for a specific date (Thursday, April 11, 2008). Below this is a table with columns for 'Date', 'Description', 'Status', 'Action', 'Category', 'Cost', 'Contractor', and 'Remarks'. The table contains several rows of data, including entries for 'Oil Change', 'Filter Change', and 'Water Change'. The interface also includes various navigation buttons and a search bar.

## Engineer's Log

The engineer's log is the workplace for the chief engineer. Here he can record his daily system equipment checks, enter machine running hours, or consumption information. This will ensure that important vessel information is properly documented and planned maintenance scheduling is up to date. The engineer's log can be fully customized for the vessel and the engineer. Vital information is updated by YachtLink in the form of various maintenance procedures and routines.

- Record engineer's daily activity.
- View all maintenance activity on one screen.
- Update equipment hours and service cycles.

## Vessel Maintenance

Each department is equipped with separate maintenance logs ensuring independent maintenance history. Quickly produce reports for all planned and un-planned maintenance performed on board. Control inventory on board when spare parts are used while tracking re-occurring problem areas.

- Separate maintenance logs for each department.
- Maintenance history reporting.
- Quick viewing of maintenance history.
- Control inventory count.
- Create work lists for crew, sub Contractors and yards.

## *About YachtLink Engineering*

YachtLink Engineering Inc. is a company dedicated to the task of computer-assisted documentation and vessel management. The YachtLink® Vessel Inventory System is the corner stone of a complete integrated Vessel Management system. We have been providing software and networking services to the yachting industry since 1996. YachtLink Engineering Inc. works hard at providing the best service possible to Yachts and land based companies alike. We provide the latest technologies in many areas of the computer and yachting industries. We provide software solutions that can run in Windows, Macintosh and Linux environments.

YachtLink Engineering Inc. provides software solutions for Yachts, Yacht Suppliers, Yacht Builders, Refit Yards and Yacht Management companies. YachtLink Engineering Inc. also provides technical consulting, whatever your needs are on computer related issues, YachtLink Engineering Inc. will assist you in making the right decision and provide you with the latest technologies in the yachting market today.

### Services we provide

- Consulting.
- Hardware sales.
- Software sales.
- Installation.
- Training.
- Setup of communications systems.
- E-mail and web hosting.
- Global internet access.
- Custom Software development.
